

GENERIC ELECTIVE COURSE: Statistical Foundations for

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
GE Statistical Foundations for Psychological Research	4	3	1	0	XII Passed	Nil

Learning Objectives

- To understand the importance of statistics in psychological research.
- To develop the ability to summarize and describe data sets using descriptive statistics.
- To understand and interpret the normal distribution curve in the context of psychological data analysis.
- To analyze relationships between variables using correlation techniques.
- To understand basics of hypothesis testing and determining statistical significance in psychological research.

Learning outcomes

By studying this course, students will be able to:

- Calculate and interpret descriptive statistics such as measures of central tendency and variability.
- Understand and apply the normal probability curve and z-scores.
- Conduct correlation analysis and interpret results.
- Understand testing of hypotheses and the implications of statistical significance.
- Use statistical reasoning to evaluate psychological research and draw valid conclusions.

Syllabus

UNIT-I: Introduction

(12 Hours)

Importance of statistics in psychological research; Descriptive and Inferential Statistics; Scales of Measurement; Measures of Central Tendency (Mode, Median, Mean): Properties and Computation using raw scores; Measures of Variability(Range, Variance, Standard Deviation): Properties and Computation using raw scores.

UNIT – II: Standard Scores & Normal Probability Curve (8 Hours)

Standard Scores (z-scores and T-scores): Properties and Computation using raw scores; Normal Probability Curve: Nature and Properties; Skewness & Kurtosis: Meaning and Types

UNIT–III: Correlation (10 Hours)

Correlation: Direction and Degree; Correlation and Causation; Pearson's Coefficient of Correlation: Assumptions and Computation from raw scores; Cautions concerning Correlation Coefficients

UNIT–IV: Hypothesis Testing (15 Hours)

Testing a Hypothesis about a Single Mean; Steps of Hypothesis Testing; Null hypothesis & Alternate hypothesis; Retention & Rejection of Null hypothesis; p - values and statistical significance; Errors in hypothesis testing (Type I & Type II Errors); t - test (independent & paired sample); Difference between Parametric and Non-Parametric Tests

Tutorial Component (15 Hours)

The following suggestive list of activities may be done manually or using excel tool pack or statistical software:

- Applying statistical methods to real-world psychological research
- Calculating descriptive statistics
- Drawing The Normal Probability Curve
- Problems Based On Standard Scores
- Calculating and Interpreting Pearson's Coefficient Correlation
- Performing Hypothesis Testing Using T-test
- Interpreting Data Based On P-values and statistical significance
- Reporting Results in APA Format
