

DISCIPLINE-SPECIFIC ELECTIVE COURSE - 22 (DSE-22)

Fundamentals of Natural Products

CREDIT DISTRIBUTION, ELIGIBILITY AND PRE-REQUISITES OF THE COURSE

Course title & Code	Credits	Credit distribution of the course			Eligibility criteria	Pre-requisite of the course (if any)
		Lecture	Tutorial	Practical/ Practice		
Fundamentals of Natural Products (DSE-22)	4	2	--	2	--	--

Learning Objectives:

The primary objective of this course is to provide students with a comprehensive understanding of natural product chemistry, including its historical development, modern applications, classification, biosynthesis, and methods for isolation and purification.

Learning Outcomes:

By the end of this course, students will understand the scope and significance of natural product chemistry in both historical and modern contexts, particularly its role in drug discovery. Students will classify major natural product groups-such as alkaloids, terpenoids, flavonoids, phenolics, peptides, glycosides, polyketides, steroids, and hormones-and understand their structures and functions.

SYLLABUS OF DSE 22

Unit 1: Introduction

(4 Hours)

Definition and scope of natural product chemistry, historical significance and modern relevance, Primary vs secondary metabolites, Sources of natural products: terrestrial and marine origin, importance in drug discovery and development.

Unit 2: Classification of Natural Products:

(7 Hours)

Alkaloids, Terpenoids, Flavonoids, Phenolics, Peptides and Proteins, Glycosides, Polyketides, Steroids and Hormones (structure and function only). Isoprene rule, mevalonate and non-mevalonate pathways, Shikimic acid pathways.

Unit 3: Isolation and Purification Techniques

(4 Hours)

Extraction methods (solvent extraction, Soxhlet, maceration, etc.), Chromatographic techniques (TLC, Column, HPLC, GC-MS), Crystallization and distillation techniques, Bioassay-guided fractionation.

Unit 4: Total Synthesis of Natural Products

(15 Hours)

Artemisinin (Antimalarial); Berberine (anti-inflammatory); Lysergic Acid Diethylamide (Psychedelic drug).

Biosynthesis of Natural Products: Artemisinin, Berberine, and Lysergic Acid Diethylamide (LSD).

Practical component

1. Isolation of natural products: Isolation of β -carotene from carrots.
2. Isolation of natural products: Isolation of caffeine from tea leaves.
3. Isolation of natural products: Isolation of piperene from black pepper.
4. Isolation of natural products: Isolation of eugenol from cloves.
5. Synthesis of 7-hydroxy-4-methylcoumarin
6. Synthesis of a simple dipeptide (gly-gly) by DCC coupling using N-protected amino acids.
7. Synthesis of simple amino acids
